

Automation Test Engineer

What we do

Novia Financial is an award-winning financial technology company based in the heart of Bath. As part of our wealth management service for investment advisers and their clients we combine the latest in wrap platform technology, online functionality, and management information.

We're determined to deliver technology that will keep us at the forefront of Intelligent Wealth Management and are building a modern scalable and flexible microservices architecture to help us to achieve our goal. As we embark upon a new and exciting period of change and growth to make our mark on the world, we are looking for people that want to make theirs too!

How you fit in

Our team work in an agile environment, and you will be welcomed into one of four SCRUMS with two week sprints and variations of Product Owners, SCRUM Masters, Developers, Business Analysts, DevOps, QA/Testing, Support, DBAs, Site Reliability Engineers, participating in the redevelopment of our customer facing products.

What you will do day-to-day

You will support the Test Lead in evolving the Automation Strategy and tooling, sharing techniques and advocating best practice through technical workshops and collaboration. In this role you will redevelop our existing Automation Test Solution, achieving autonomous Regression Testing via the CI/CD Pipeline. You will also facilitate the integration of software deliveries from a 3rd party and align the Automation suite to ensure Test Coverage Targets meet the required levels for each release across our IT Estate.

About you

You are a talented Test Engineer who can work effectively as part of a multi-disciplinary team in an evolving technical environment. You have a passion for problem solving and applying and sharing your breadth of experience to make improvements to existing practices and processes. You are keen to learn and develop and build on your existing skills.

What we are looking for

Our priority is to find colleagues that share our passions and mindset. Working at the forefront of technology means that you're constantly evolving your skills and experience, so we don't expect you to have used all of our tech stack but we do expect expertise in some and certainly a desire to become expert in Automation Testing. It is in both of our interests to work with you to place you in a role that speaks to your strengths and allows you contribute, feel included, learn, grow and to have a voice and challenge in a safe and secure way.

Our current tools, technology and practices include: Agile, Selenium, Cucumber/Specflow, Postman/Ready API, CI/CD Builds, Git Flow, .NET Core, C#, ASP.NET MVC4+, HTML5/CSS, Typescript, JavaScript, SQL Server, Azure DevOps, MongoDB, NServiceBus, JavaScript, vue.js, VSTS, NoSQL Databases (Mongo), Azure Service Bus, nServiceBus, BDD/TDD, Testing – Microservices architecture, API Testing, Data Driven Testing – data management/creation tasks, BVT, Integration, UAT, Load/Performance, Test Coverage Analysis; defining coverage targets for functional and non-functional requirements and systems, integration, and regression testing for in-house software development...
